

WeRateDog project

By: Eslam Ali Abou-Shashaa

If you have ever asked yourself what kind of the dogs which favourite to human this question we can giss without data but now we know the type dog which favorite to human from extracting data from social media in this case we will use twitter specialized page "WeRateDog" we take every tweet in this page and analysis it form (Nov. 2015 to August 2017)

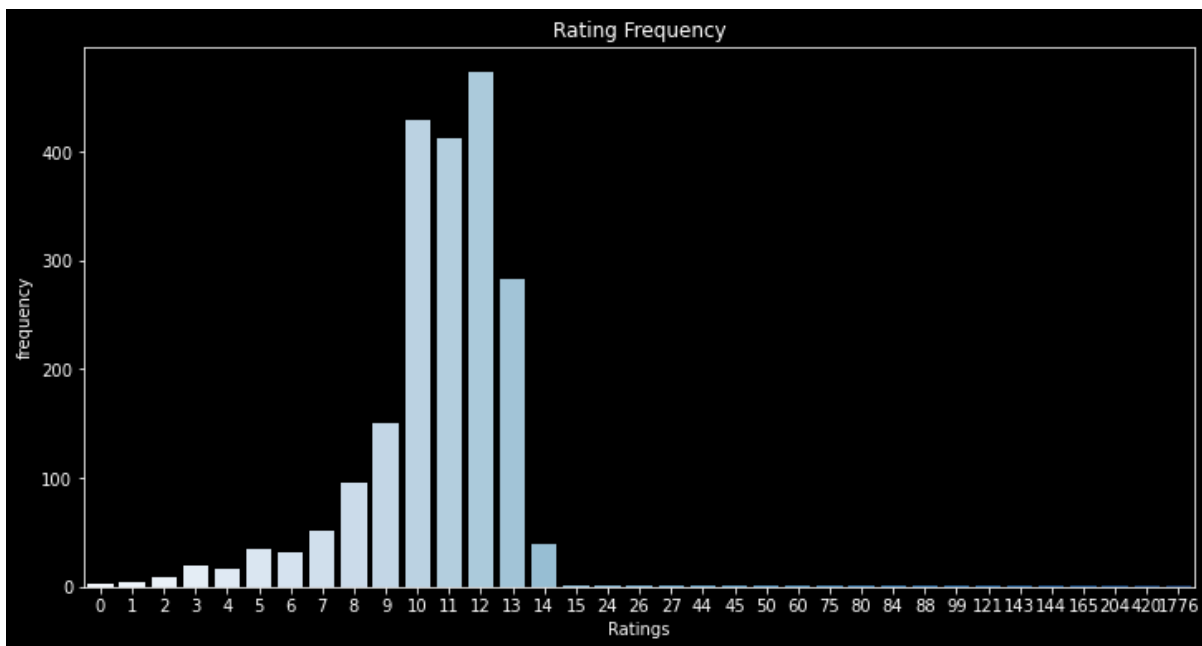

we can get this data from three sources

- 1- from archive-enganced.csv from Udacity
- 2- we can download the image_prediction programmatic
- 3- we can get data from twitter API

when we have this file can analysis this data to answer some question to know kind of the dog which favourite to human

first question.

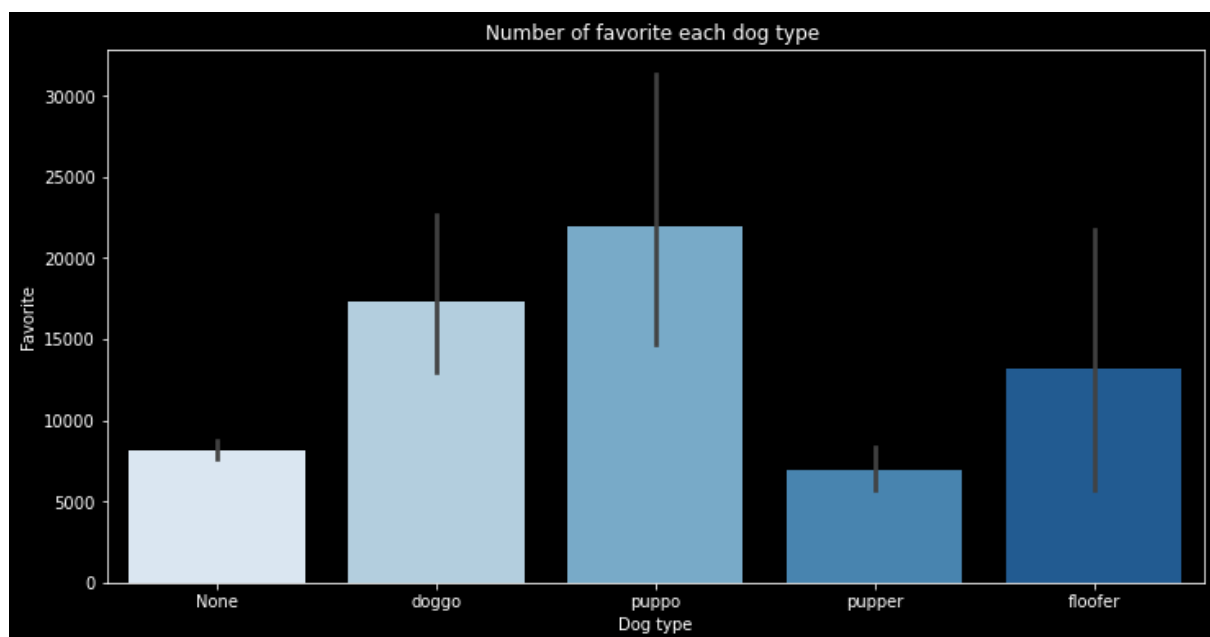

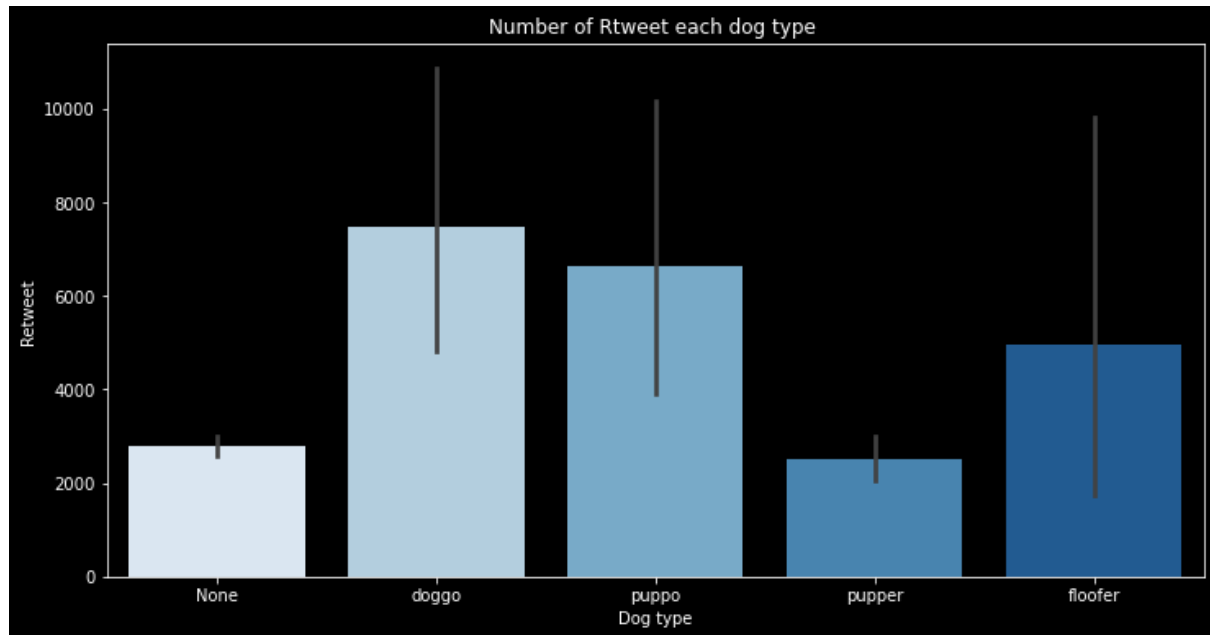

What does the rating distribution look like?

from this photo we know most people in this page like dog because he give over rate

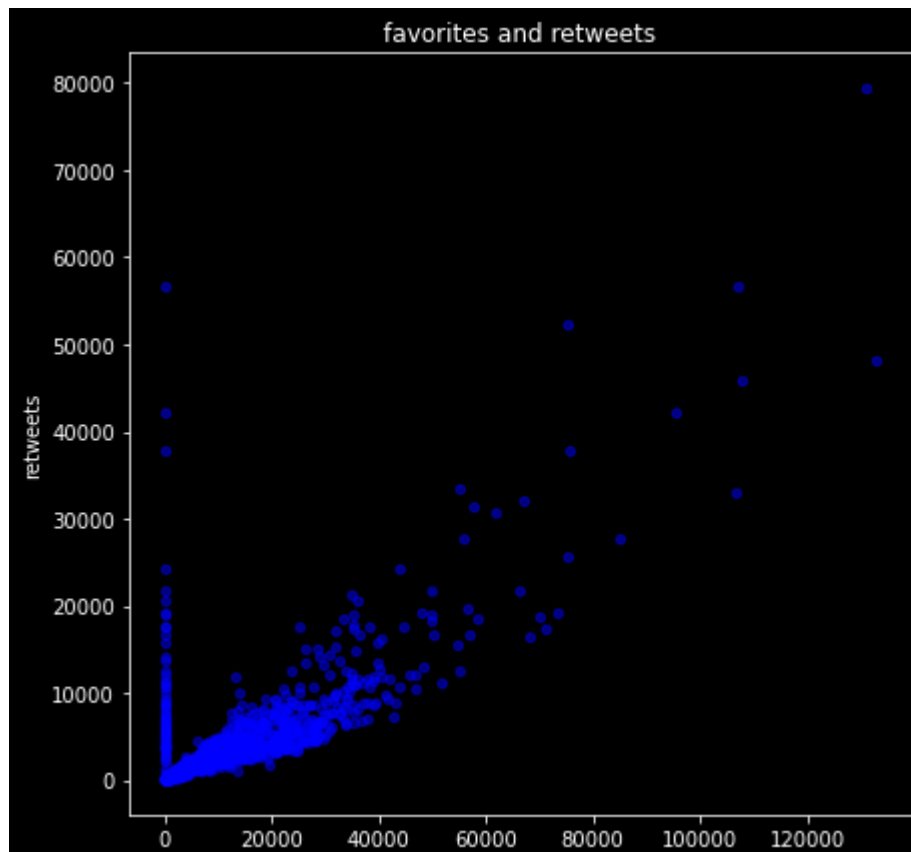

What type of dog which most people reacted with in a photo ?

this photo display most people retweet with doggo so that people like it

the photo above most people react love with puppo so that people like it
we can note most favorite type dog i s doggo and puppo

When can I get many favorites in my tweet ?

you can get lot of favourite when the retweet is high and your retweet conceded on puppo and doggo.

finally,
we can know about anything but we must gather and assess and clean to make correct data and we can analyze it to extract information.
